## Secure Toll-Free Calling

SecureCo's Toll-Free calling solutions connect your customers in Australia and from around the world.

### Do you need your clients to talk to you from across Australia or the world?

Many businesses today need to offer customers a means to reach them. Most often for support or sales.

SecureCo's Intelligent Network Toll-Free services (13/1300/1800 numbers) make it easier for your business to operate in an increasingly dispersed manner by providing callers with the ability to dial-in to your business at subsidised call rates using an inbound Toll-Free service number.

### SecureCo offers Carrier Grade calling to its customers

Our Secure Toll-Free calling voice services provide a wide variety of configuration options to match your business needs.

#### Simple Toll-Free Configuration

Simple configuration offers a call routing plan with a single or multiple answer points. It also comes with a choice of any basic routing features including:

- Australia wide land and mobile routing
- Call splaying and overflow routing
- Time of day, day of week, day of year routing.

#### Complex Toll-Free Configuration

Complex configurations offers origin-based routing features such as:

- Selected caller routing
- State-based routing
- Charge district routing
- Post code routing

#### Toll-Free Features

##### Intelligent Network Platform

Offers a range of call handling configurations, from basic call answer features through to multiple answer points or origin-based routing.

##### Geo-based Calling

Ensures a single common number is provided to your customers, while the call is routed to the nearest appropriate geographical answer point for the caller.

##### Competitive Pricing

Lowers your cost of taking calls by leveraging our group buying power with the leading telco providers.

##### Network Monitoring

Real-time and proactive network monitoring ensures quality issues are addressed with minimal customer call impact.

##### Call Quality

Experience crystal clear calls with no drop outs or interruptions. Real-time reporting provides empirical proof of network call quality and problem isolation.

### Domestic Toll-free
